The invention relates to a substantially purified nectin3alpha, beta, agamma and nectin-4 polypetides and their corresponding polymucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial more modelial parrier function activity, endothelial parrier function activity. The epithelial perfection activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy,

asthma, allergy, allograft rejection, metastasis of cancer cells, the kidner transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogeneic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is human nectin-3gamma protein.
                                                                                                                                                                                                                                                                                                                                                                                                              120

The invention relates to a substantially purified nectin3alpha, beta, gamma and nectin-4 polypeptides and their corresponding polymucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adeneral junction formation activity, epithelial corresponding bring a ctivity, rital polypeptide binding activity. The epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The above mentioned method is inflammation, sepsis, cedema, diabetic retinopathy, asthma, allery, allograft rejection, metastasis of cancer cells, parcellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, inhibiting angiogenesis in a mammal and traisme or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restences a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restences a subject, such as ischaemia and treating herpesvirus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is human nectin-3beta protein Human nectin-3beta gene is located on chromosome 3

The invention relates to a substantially purified nectin3alpha, beta, gamma and nectin-4 polypeptides and their corresponding polynucleotides. Section by and protein are useful for treating a disease associated with cell adhesion activity, adherens juuction formation activity, epithelial cell adhesion activity, ral polypeptide binding activity, epithelial or migration activity, ral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, catcher cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for the kidney or inflammatory bowel disease. Nectin DNA is also useful for condition of a tissue or a subject, such as isochaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenorsis, tumour growth and treating herpesvirus infection.

C Nectin is also useful for modulating proliferation or migration of an endothelial cell). The present sequence is a fusion protein encoding 6 amino actids from mouse nectin-3 protein and the rest form human nectin-3 beta agene is located on chromosome 3.

gamma and nectin-4 polypeptides and their corresponding polymolecides.

Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, metastasis of cancer cells, asthma, allergy, allograft rejection, metastasis of cancer cells, asthma, allergy, allograft rejection, metastasis of cancer cells, the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenests in a mammal and treating endothelial migration, inhibiting angiogenests in a mammal and treating endothelial migration, is considered in a subject, such as stroke, restenosis, tumour growth and treating herpeavirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is human nectin-section.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, for treating or preventing heart failure, malaria,
Human; nectin-3beta; therapy; cell adhesion; cell proliferation; sepsis; paracellular transport disorder; kidney; diabetic retinopathy; allorgy; allograft rejection; metastasis; restenosis; inflammatory bowel disease; oedema; atherosolerosis; isolaemia-reperfusion injury; thrombosis; stroke; tumour; cancer; herpesvirus infection; asthma; chromosome 3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema

Nectin-3 is an immunoglobulin-like cell adhesion molecule that shows homophilic and heterophilic cell-cell adhesion activities. Nectin-3 polypeptides and polynucleotides are useful for investigating the mechanisms of cell adhesion, infiltration and metastasis of cancer cells, the diagnosis of malignancies of various cancers, and the development of methods for the treatment and prevention of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endochelial parrier function activity, endochelial parrier function activity, endochelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above

mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, as albograft rejection, metastasis of cancer cells, paracellular transport disorders such as wich as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is mouse nectin-3beta protein
                                                                                                                                                                                                                                                                                                                                                                                                                     VLFKNYSLNDATITLHNIGFSDSGKYICKAVTFPLGNAQSSTTVTVLVEPTVSLIKGPDS

The invention relates to a substantially purified nectinialpha, beta, gamma and nectin-4 polypeptides and their corresponding polynucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 IVEPHVTAVWGKNVSLKCLIEVNETITQISWEKIHGKSTQTVAVHHPQYGFSVQGDYQGR 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        301 KSVWSRLDGQWPDGLLASDNTLHFVHPLTFNYSGVYICKVTWSLGQRSDQKVIYISDVPF 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            121 VLFKNYSLNDATITLHNIGFSDSGKYICKAVTFPLGNAQSSTTVTVLVEPTVSLIKGPDS 180
                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   mentioned method is inflammation, sepals, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is mouse nectin-3gamma protein
      metastasis; restenosis; inflammatory bowel disease;

                                                                                                                                                                                                                                                                                                           The present sequence represents a murine nectin-3 polypeptide. Nectin-3 is an immunoglobulin-like cell adhesion molecule that shows homophilic and heterophilic cell-cell adhesion activities. Nectin-3 polypeptides and polynucleotides are useful for investigating the mechanisms of cell adhesion, infiltration and metastasis of cancer cells, the diagnosis of malignancies of various cancers, and the development of methods for the treatment and prevention of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mouse; nectin-3gamma; therapy; cell adhesion; cell proliferation; sepsis; paracellular transport disorder; kidney; diabetic retinopathy; allergy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a substantially purified nectinialpha, beta, gamma and nectin-4 polypeptides and their corresponding polynucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or endothelial barrier function activity, endothelial proliferation or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; nectin-3beta; therapy; cell adhesion; cell proliferation; sepsis; paracellular transport disorder; kidney; diabetic retinopathy; allergy; allograft rejection; metastasis; restenosis; inflammatory bowel disease; oedema; atherosolerosis; ischaemia-reperfusion injury; thrombosis; stroke; tumour; herpesvirus infection; fusion protein; immunoglobulin G1; cancer; asthma.
                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                      ischaemia, atheroscierosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is human nectin-3beta-FIAGpolyHis fusion protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       KSVWSRLDGQWPDGLLASDNTLHFVHPLTFNYSGVXICKVTNSLGQRSDQKVIYISDVPF

                                                                                                                                                                                                                                                                                    The invention relates to a substantially purified nectinialpha, beta, gamma and nectin-4 polypeptides and their corresponding polynucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above
                                                                                                                  Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             proliferation or angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is a fusion protein containing human nectin-3beta protein fused to immunoglobulin 1gg1 Fc region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                           mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer calls, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MARTLRPSPLCPGGGKAQLSSASLLGAGLLLQPPTPPPLLLLLFPLLLFSRLCGALAGPI

The epithelial or

```
gamma and nectin-4 polypeptides and their corresponding polynuclectides.

Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, parcellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, condition or angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,
                                                             nectin-3alpha; therapy; cell adhesion; cell proliferation; sepsis;

Nectin is also useful for modulating proliferation or migration of an endethelial cell, an epithelial cell or a smooth muscle cell (vascula smooth muscle cell). The present sequence is human nectin-Jalpha DNA. Human nectin-Jalpha gene is located on chromosome 3
                                                                                                                                                                                                       49;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      384 IFVTVLLTPRKK--RPSYLDKVIDLPPTHKPPPLYEERSPPLPQKDLFQ 430

```
The invention relates to a novel method for identifying a candidate p53 pathway modulating agent. The method comprises providing an assay system having a purified IG polypeptide or nucleic acid, or their functionally active fragment or derivative. The method is useful for identifying modulators of the p53 pathway, particularly for identifying agents for treating disorders (e.g. breast cancer, colon cancer, kidney cancer, lung cancer or cancer of the ovary) associated with defective p53 function.

The identified modulators are useful as targets for novel therapeutics. The identifiers of the p53 pathway, and as therapeutic rargets for novel therapeutics. The method is also useful for diagnosing disorders associated with defective p53 pathway, and as therapeutic targets for disorders associated with defective p53 function. This sequence represents a human protein relating to the human IG genes used in the assay for identifying modulators of the p53 pathway of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosins is based on cor the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, container interfering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; an aptamer against the polypeptide; a (monoclonal) antibody (Ab) against the colypeptide, preferably humanised or human; an anti-idotype, non-human container are group, cell toxin, immunostimulatory molecules and/or with a reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polymucleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated concertially with anti-human CD4 murine monoclonal antibodies; bicinylated second antibody; streptavidin-conjugated horseradish concertially but non-malignant cells only weakly. In 15 of 51 samples were counterstained with hemalum (blue). Malignant cells stained strongly but non-malignant cells only weakly. In 15 of 63 samples were also stained. ADR65054 represent the conversioned and cytoplasmic staining was very strongy invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           senthal A, Hermann K, Pilarsky C, Specht T;

This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer. Or the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, short-interfering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; an aptamer against the polypeptide; a (monoclonal) antibody directed against an anti-idiotype, non-human (monoclonal) antibody directed against an anti-idiotype, non-human (monoclonal) antibody directed against an anti-idiotype, non-human (monoclonal) antibody directed against an anti-idiotype, non-human (monoclonal) antibody directed against an anti-idiotype, non-human (monoclonal) antibody directed against an or any of the above darivatised with a reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polymucleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that prostatic cancer patients, or subjects at risk, were incubated concerned antibody, streptavidin-conjugated horseradish peroxidase and then diaminobenzidine as colour former (brown). The sequentially with anti-human CDH murine monoclonal antibodies; supplementationally with non-malignant cells only weakly. In 15 of 63 samples of adenocarcinoma, membrane and cytoplasmic staining was very strong, and lymph node metastases were also stained. ADR65805-ADR66954 represent the polynucleotide and polypeptide sequences used in the method of the invention

The invention relates to a substantially purified nectin3alpha, beta, gamma and nectin-4 polypeptides and their corresponding polynucleotides. Section DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial corresponding barrier function detrivity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, asthma, allergy, allograft rejection, metastasis of cancer cells, continuation of inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as isolatenal actions, thrombosi Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema, Claim 1; Page 80-82; 141pp; English. sepsis, stroke.

SUBCELLULAR LOCATION: Type I membrane protein.
SIMILARITY: Contains 2 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 1 immunoglobulin-like V-type domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                16-OCT-2001 (Rel. 40, Created)
16-OCT-2001 (Rel. 40, Last sequence update)
05-JUL-2004 (Rel. 44, Last annotation update)
Poliovirus receptor related protein 1 precursor (Herpes virus entry mediator C) (HveC) (Nectin 1).
Name=PVRL1; Synonyms=HVEC, PRR1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -1- SUBUNIT: Interacts with HSV glycoprotein D (gD) (By similarity)
-1- SUBCELLULAR LOCATION: Type I membrane protein.
-1- SIMILARITY: Contains 2 immunoglobulin-like C2-type domains.
-1- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
